

PHYSICAL SECURITY

Keep you campus, your assets, your guests safe and secure

In addition to developing and maintaining Network Security, many organizations are implementing solutions to prevent and discourage physical threats to their staff, inventory and intellectual property. NIC understands that aligning the right combination of security measures together creates a stable environment. Deterrence, control and an evidentiary trail are key elements of any Physical Security offering.

NIC's Physical Security Specialists work with our customers to perform physical security audits, evaluating key interior and perimeter weak-spots to develop multi-pronged security offerings. Our consultative approach allows collaborating with our customer's specific security challenges. Design plans incorporate an exhaustive security plan to assure both internal and external security threats.

Our teams blend industry leading strategies around Surveillance (IP CCTV), Access Control and Intrusion Detection using converged network technologies.

Surveillance (IP CCTV) Solutions incorporate static, dynamic, PTZ, Mega-Pixel, dome, thermal and hidden camera technology. Monitoring and recording of video feeds is customized to allow a wide-range of options, including: video control walls/stations, on/off-network storage and archiving.

Access Control Systems now include solutions with a variety of end-points, including card scanners, fingerprint readers, and retinal scanners. These systems can integrate with CCTV and Intrusion Systems to provide closed-loop, single reporting steps for alarms.

LAN/WAN IP Connectivity is prevalent in security solutions. Assure that your security systems partner has the network expertise and experience to deploy and support today's sophisticated solutions.

DESIGN AND CORDINATION SERVICES

- Site Surveys and assessment
- Security Auditing
- Complete security planning
- Technical project management
- Phased implementations

SECURITY SURVEILLANCE SYSTEMS

- Analog and digital video surveillance systems
- Thermal Imaging Cameras
- Efficient video storage and cataloging
- Pan-tilt-zoom units and controls
- Biometric-Iris recognition
- Network enabled for remote monitoring
- Vandal proof housings
- Ready-to-go bundles

ACCESS CONTROL SYSTEMS

- Keypad and card access control
- Intrusion detection
- Door contacts and motion detectors
- Internet enabled for remote administration
- Detailed reporting

SUPPORT SERVICES

- Complete security training
- Remote and on-site support services
- Proactive maintenance program
