

PROFESSIONAL SERVICES 5 YEAR TECHNOLOGY PLANNING

DESCRIPTION:

A well-conceived technology plan factors in how your organization operates. It incorporates your business and performance objectives, your organizational processes, as well as your immediate and long-term technology requirements. A plan considers budgets—real and projected—and estimated business growth. From the knowledge gleaned, NIC develops strategic, multi-year technology programs that align your technology resources to support your organization.

Plans are designed to increase your return on investment, and reduce your total cost of ownership.

NIC will help you prioritize, justify and budget your technology agenda over a multi-year time frame. Systems and equipment are installed at designated intervals throughout the duration of the plan. NIC annually reviews and updates plans to ensure objectives are met.

Our plans serve as a guide or road map with defined milestones along the way. They assist you in tracking budgets and schedules. They help you maintain project control and continuity. Plans clearly define IT strategies and provide you with a methodical, economical approach to achieving your business objectives.

Call NIC for a total solution. We are a single source for all of your technology requirements. Services include consulting, design, project management, system installation, maintenance, and support for all network systems.
