

NETWORK SYSTEMS AUDIO/VIDEO SYSTEM

DESCRIPTION:

Audio video systems not only provide crisp clear presentations, but also streamline how resources are shared, accessed, and stored. NIC installs systems to maximize the quality of presentations both visually and audibly. When these components work in parallel, they can significantly enhance the retention and quality of your event. This is true for any type of environment from small group meetings to large lecture halls and stadiums.

Additionally, systems are equipped with a number of features to increase functionality and convenience. Video distribution stores and monitors videos from a central location. It gives employees immediate access to a company's library of videos. Employers benefit through greater control over the types of videos viewed. It also serves as a safeguard from license agreement violations.

Media retrieval systems have a web-based interface for quick access. Users control scheduling, cataloging, and video commands such as stop, play, forward-wind, and rewind.

Video conferencing is one of the greatest cost and time saving components of this system. Video conferencing significantly reduces business travel and the costs associated with it. Communicating via videoconference allows for impromptu business meetings, yet retains face-to-face interaction.

Paging, the ability to make announcements throughout an organization, even in campus type settings is another time saving measure. Utilizing the intercom permits employees to have two-way conversations without having to relocate. Both features hasten response time in the event of an emergency.

Depending on specific needs of your organization, other features include bell scheduling signals, back ground music and sound reinforcement.

SERVICES:

Design and Coordination Services

*Integrated audio and video designs
State-of-the-art presentation facilities
Technical project management
Bid management*

Audio Video Systems

*Multi-zoned paging systems
Presentation facilities
Background music
Video conferencing
Sound reinforcement
Video distribution
Media retrieval
Digital video distribution
Video-on-Demand
Bell schedules and tone generation*

Support Services

*Training for users and administrators
Remote and on-site support services
Adds, moves and changes
Proactive maintenance program
Provide spare parts and technical support*
