

NETWORK SYSTEMS STRUCTURED CABLING SYSTEM

DESCRIPTION:

When NIC assumes the responsibility of your cabling installation, our project managers schedule, budget, test, coordinate, and document the entire job. We work closely with the different construction trades to make sure schedules are coordinated for an on time, on budget delivery. The ability to run all of your cabling requirements through one firm saves time and lowers the total cost of the project.

NIC is a single-source provider for all elements of a complex technology system. In addition to cabling, we design and install network systems. This expertise ensures your space and raceway planning have the capacity to accommodate all special systems. What's more, we have the in-house resources to install all Division 17 systems.

We provide all of our clients with a complete set of AutoCAD documentation and test results of the system. The drawings accurately communicate the scope of work while in progress. Once the job is complete, they become a set of as-builts allowing for easy maintenance, troubleshooting and expansion plans.

NIC has six RCDD engineers on staff. They guarantee that the all standards are met to achieve optimal performance. All NIC designs are RCDD approved.

Once a job is complete, our support services can handle cabling moves, additions, and changes. In case of an emergency, our engineers are available to troubleshoot, provide parts, and develop contingency plans.

Call NIC for a total solution. We are a single source for all of your technology requirements. Services include consulting, design, project management, system installations, maintenance, and support for all network systems.

SERVICES:

Design and Coordination Services

Business analysis, technology consulting

Design and space planning by BICSI RCDDs

Coordination with other trades

Technical Project Management

Resource scheduling and coordination

Material expediting

Contract administration

Web access to project documents and collaboration tools

Structured Cabling

Category 3, 5, 5e, 5E and 6 cabling

Fiber optic cabling

Video backbone and station cable

Paging and sound reinforcement

CCTV and security cabling

Conduit, raceway and closet build out

Documentation

AutoCAD as-builts

End-to-end labeling

Certification testing on every cable run

Support Services

Moves, adds and changes

25-year warranty on end-to-end installations

Training on BICSI standards

Emergency restoration
